# CHAPTER 1

---

## Description

---

Frecency is a Python library based on Mozilla's [algorithm](#) that can be used to give arbitrary objects an absolute weight.

# CHAPTER 2

---

## Functions

---

`frecency.score_item(recencies, time_constant)`

Calculates the absolute score of a given item.

### Parameters

- **recencies** – an iterable containing int time offsets from the current time
- **time\_constant** – numeric constant, should be > 0 in most cases

`frecency.score_items(items, time_constant, score_function=None)`

Calculates the absolute score for all items given.

### Parameters

- **items** – a dictionary of {id: recencies}, or a list of pairs
- **time\_constant** – numeric constant, should be >0 in most cases
- **score\_function** – function matching the signature of score\_item used to score individual items
